

AJURUDDIN ALI

Cloud & DevOps Engineer

ajuruddinali03@gmail.com | Gorakhpur, Uttar Pradesh | [GitHub](#) | [LinkedIn](#) | [Codeforces](#)

EDUCATION

B.Tech in Computer Science & Engineering

2023 – 2027

Samrat Ashok Rajkiya Engineering College (AKTU Affiliated), Mirzapur, Uttar Pradesh | CGPA: 7.0/10

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Cloud Computing, DBMS

CERTIFICATIONS

AWS Certified Cloud Practitioner (CLF-C02)

In Progress — 2026

AWS Certified Solutions Architect – Associate (SAA-C03)

Planned — Q3 2026

Cloud & DevOps Intern — UPPCL (Uttar Pradesh Power Corporation Limited)

Jun 2026 – Present

- Worked on cloud infrastructure setup and management using AWS services including EC2, S3, IAM, and VPC in a government enterprise environment
- Assisted in implementing CI/CD pipelines using GitHub Actions for automated deployment workflows, reducing manual deployment effort
- Containerized applications using Docker and supported deployment on Linux servers; configured Security Groups and IAM roles following least-privilege principles
- Monitored cloud resources using CloudWatch; wrote Bash scripts to automate routine infrastructure tasks and log management

PROJECTS

[Project Name 1] — Cloud Infrastructure / AWS

[Month Year]

- [Describe the problem statement and what you built — keep it outcome-focused]
- [Mention specific AWS services used: EC2, S3, IAM, CloudFront — and why each was chosen]
- [Quantify impact: reduced cost by X%, achieved 99.9% uptime, cut deployment time by Y%]

Tech Stack: AWS | Terraform | Linux | Python

[Project Name 2] — CI/CD Pipeline Automation

[Month Year]

- [Describe what the pipeline automates and what application it deploys]
- [Detail the stages: source → build → test → containerize → push → deploy to Kubernetes / EC2]
- [Mention monitoring, alerting, or automated rollback strategy implemented]

Tech Stack: GitHub Actions | Jenkins | Docker | Kubernetes | YAML

[Project Name 3] — Infrastructure as Code (IaC)

[Month Year]

- [Describe the cloud environment provisioned: VPCs, subnets, EC2, security groups]
- [Mention Terraform modules, remote state management with S3 + DynamoDB, workspace strategy]
- [Highlight security best practices: IAM least-privilege, private subnets, encrypted S3 buckets]

Tech Stack: Terraform | AWS | Bash | Git

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, S3, VPC, IAM, CloudFront, CloudWatch, Auto Scaling, Load Balancer, Security Groups), Terraform, Linux Administration	Containers & Orchestration: Docker, Kubernetes, Container Orchestration, Docker Compose, Helm
CI/CD & Automation: GitHub Actions, Jenkins, CI/CD Pipeline, YAML, Infrastructure as Code (IaC), Ansible	DSA & Problem Solving: Java (LeetCode — targeting 200 problems)
Scripting: JavaScript, Python, Bash	Version Control: Git, GitHub, GitLab
DevOps & Monitoring: CloudWatch, Grafana, Prometheus, Log Management, Alerting	Operating Systems: Linux (Ubuntu, CentOS), Windows Server, WSL
